

The Front-End Checklist

The Front-End Checklist Application is perfect for modern websites and meticulous developers! ★ Generated on <http://frontendchecklist.io> ★

Project Name

web-dev-hub

Page title or URL

<https://lambda-w-1-notes.netlify.app/>

Developer's name or team

bryan guner

0/47 ✓ high priority

0/25 ✓ medium priority

0/16 ✓ low priority

HEAD0 % Head items are ✓

- ☐

Doctype: The Doctype is HTML5 and is at the top of all your HTML pages.
- ☐

Charset: The charset declared (UTF-8) is declared correctly.
- ☐

Viewport: The viewport is declared correctly.
- ☐

Title: A title is used on all pages
- ☐

Description: A meta description is provided, it is unique and doesn't possess more than 150 characters.
- ☐

Favicons: Each favicon has been created and displays correctly.
- ☐

Apple Web App Meta: Apple meta-tags are present.
- ☐

Windows Tiles: Windows tiles are present and linked.
- ☐

Canonical: Use rel="canonical" to avoid duplicate content.
- ☐

Language attribute: The <code>lang</code> attribute of your website is specified and related to the language of the current page.
- ☐

Direction attribute: The direction of lecture is specified on the html tag (It can be used on another HTML tag).
- ☐

Alternate language: The language tag of your website is specified and related to the language of the current page.
- ☐

Conditional comments: Conditional comments are present for IE if needed.
- ☐

RSS feed: If your project is a blog or has articles, an RSS link was provided.
- ☐

Inline critical CSS: The inline critical CSS is correctly injected in the HEAD.
- ☐

CSS order: All CSS files are loaded before any JavaScript files in the HEAD
- ☐

Facebook Open Graph:
- ☐

Twitter Card:

HTML0 % HTML items are ✓

- ☐

HTML5 Semantic Elements: HTML5 Semantic Elements are used appropriately (header, section, footer, main...).
- ☐

Error pages: Error 404 page and 5xx exist
- ☐

Noopener: In case you are using external links with target="_blank", your link should have a rel="noopener" attribute to prevent tab nabbing. If you need to support older versions of Firefox, use rel="noopener noreferrer"
- ☐

Clean up comments: Unnecessary code needs to be removed before sending the page to production.
- ☐

W3C compliant: All pages need to be tested with the W3C validator to identify possible issues in the HTML code.
- ☐

HTML Lint: I use tools to help me analyze any issues I could have on my HTML code.
- ☐

Link checker: There are no broken links in my page, verify that you don't have any 404 error.
- ☐

Adblockers test: Your website shows your content correctly with adblockers enabled

WFR FONTS0 % Webfonts items are ✓

WEB FONT

- Webfont format:** WOFF, WOFF2 and TTF are supported by all modern browsers.
- Webfont size:** Webfont sizes don't exceed 100 KB (all variants included).
- Webfont loader:** Control loading behavior with a webfont loader.

CSS0 % CSS items are ✓

- Responsive Web Design:** The website is using responsive web design.
- CSS Print:** A print stylesheet is provided and is correct on each page.
- Unique ID:** If IDs are used, they are unique to a page.
- Reset CSS:** A CSS reset (reset, normalize or reboot) is used and up to date.
- JS prefix:** All classes (or id- used in JavaScript files) begin with js- and are not styled into the CSS files.
- Embedded or inline CSS:** Avoid at all cost embedding CSS in <style> tags or using inline CSS
- Vendor prefixes:** CSS vendor prefixes are used and are generated accordingly with your browser support compatibility.
- Concatenation:** CSS files are concatenated in a single file (Not for HTTP/2).
- Minification:** All CSS files are minified.
- Non-blocking:** CSS files need to be non-blocking to prevent the DOM from taking time to load.
- Stylelint:** All CSS or SCSS files are without any errors.
- Responsive web design:** All pages were tested with the correct breakpoints.
- CSS Validator:** The CSS was tested and pertinent errors were corrected.
- Desktop Browsers:** All pages were tested on all current desktop browsers (Safari, Firefox, Chrome, Internet Explorer, EDGE...)
- Mobile Browsers:** All pages were tested on all current mobile browsers (Native browser, Chrome, Safari...)
- OS:** All pages were tested on all current OS (Windows, Android, iOS, Mac...)
- Reading direction:** All pages need to be tested for LTR and RTL languages if they need to be supported.

JAVASCRIPT0 % JavaScript items are ✓

- JavaScript Inline:** You don't have any JavaScript code inline (mixed with your HTML code).
- Concatenation:** JavaScript files are concatenated.
- Minification:** JavaScript files are minified (you can add the .min suffix).
- JavaScript security:**
- noscript tag:** Use `<noscript>` tag in the HTML body if a script type on the page is unsupported or if scripting is currently turned off in the browser. This will be helpful in client-side rendering heavy apps such as React.js.
- Non-blocking:** JavaScript files are loaded asynchronously using async or deferred using defer attribute.
- Modernizr:** If you need to target some specific features you can use a custom Modernizr to add classes in your <html> tag.
- ESLint:** No errors are flagged by ESLint (based on your configuration or standards rules).

IMAGES0 % Images items are ✓

- Optimization:** All images are optimized to be rendered in the browser. WebP format could be used for critical pages (like Homepage)
- Picture/Srcset:** You use picture/srcset to provide the most appropriate image for the current viewport of the user.
- Retina:** You provide layout images 2x or 3x, support retina display.
- Sprite:** Small images are in a sprite file (in the case of icons, they can be in an SVG sprite image).
- Width and Height:** Set width and height attributes on if the final rendered image size is known (can be omitted for CSS sizing).
- Alternative text:** All have an alternative text which describe the image visually.

- ☐ **Lazy loading:** Images are lazyloaded (A noscript fallback is always provided).

ACCESSIBILITY

0 % Accessibility items are ✓

- ☐ **Progressive enhancement:** Major functionality like main navigation and search should work without JavaScript enabled.
- ☐ **Color contrast:** Color contrast should at least pass WCAG AA (AAA for mobile).
- ☐ **H1:** All pages have an H1 which is not the title of the website.
- ☐ **Headings:** Headings should be used properly and in the right order (H1 to H6).
- ☐ **Specific HTML5 input types are used:** This is especially important for mobile devices that show customized keypads and widgets for different types.
- ☐ **Label:** A label is associated with each input form element. In case a label can't be displayed, use aria-label instead.
- ☐ **Accessibility standards testing:** Use the WAVE tool to test if your page respects the accessibility standards.
- ☐ **Keyboard navigation:** Test your website using only your keyboard in a previsible order. All interactive elements are reachable and usable.
- ☐ **Screen reader:** All pages were tested in two or more screen readers (such as JAWS, VoiceOver, and NVDA).
- ☐ **Focus style:** If the focus is disabled, it is replaced by visible state in CSS.

PERFORMANCE

0 % Performance items are ✓

- ☐ **Page weight:** The weight of each page is between 0 and 500 KB.
- ☐ **Minified HTML:** Your HTML is minified.
- ☐ **Lazy loading:** Images, scripts and CSS need to be lazy loaded to improve the response time of the current page (See details in their respective sections)
- ☐ **Cookie size:** If you are using cookies be sure each cookie doesn't exceed 4096 bytes and your domain name doesn't have more than 20 cookies.
- ☐ **Third party components:**
- ☐ **DNS resolution:** DNS of third-party services that may be needed are resolved in advance during idle time using dns-prefetch.
- ☐ **Preconnection:** DNS lookup, TCP handshake and TLS negotiation with services that will be needed soon is done in advance during idle time using preconnect.
- ☐ **Prefetching:** Resources that will be needed soon (e.g. lazy loaded images) are requested in advance during idle time using prefetch.
- ☐ **Preloading:** Resources needed in the current page (e.g. scripts placed at the end of <body>) in advance using preload.
- ☐ **Google PageSpeed:** All your pages were tested (not only the homepage) and have a score of at least 90/100.

SEO

0 % SEO items are ✓

- ☐ **Google Analytics:** Google Analytics is installed and correctly configured.
- ☐ **Headings logic:** Heading text helps to understand the content in the current page.
- ☐ **sitemap.xml:** A sitemap.xml exists and was submitted to Google Search Console.
- ☐ **robots.txt:** The robots.txt is not blocking webpages.
- ☐ **Structured Data:** Pages using structured data are tested and are without errors. Structured data helps crawlers understand the content in the current page.
- ☐ **Sitemap HTML:** An HTML sitemap is provided and is accessible via a link in the footer of your website.
- ☐ **Pagination link tags:** Provide rel="prev" and rel="next" to indicate paginated content.
